

REVOLUTIONIZE YOUR CULTIVATION

CULTIVATION FACILITY MANAGEMENT SYSTEM

The CCMS Cultivation Facility Management System is the central "brain" of your facility. It consolidates real-time monitoring and allows control, access, and monitoring of any controller in your facility from any interface. Reducing labor costs, saving time and maximizing efficiency on a streamlined platform.

SECURITY

- Sync user permissions for all controllers from a single location.
- Ensure zero downtime with automated backups.

CONVENIENCE

- Monitor and control any device from a central location.
- Integrate multiple facilities onto a single platform for easy monitoring and access.

EFFICIENCY

- Configure all controllers remotely from the server.
- Minimize on-site visits and deployment time.

ALL-IN-ONE CONTROL

- Unify cultivation and fertigation into one single system.
- Simplify complex operations with a seamless interface.

COST-EFFECTIVE VALUE

- Centralize all your controllers with top tier facility management. CCMS Cultivation Facility Management System starting at \$6K.
- Scale your facility with massive, budget-friendly ROI.

CCMS

CCMS CULTIVATION FACILITY MANAGEMENT SYSTEM

THE CENTRAL HUB FOR ADVANCED CULTIVATION

The CCMS Cultivation Facility Management System is a central communications hub that connects room systems and enables remote oversight. It streamlines operations, coordinates workflows, and delivers total facility visibility.

FACILITY MANAGEMENT TOOL

The CCMS Cultivation Facility Management System provides one intuitive interface to manage climate, lighting, irrigation, security and more.

SECURITY

CCMS protects your facility's most sensitive data from unauthorized access. It eliminates confidential leaks and outside exposure, preventing operational interruptions.

SCALABILITY

Grow confidently from a few localized grow rooms to a multifacility operation. CCMS scales seamlessly to support expanding networks, additional rooms, and larger teams.

REDUNDANCY

When a controller fails, CCMS retains all operational data and settings. This allows you to restore functionality fast with minimal production disruption.

SOFTWARE UPDATE

Keep your system current with automated CCMS software updates. These updates constantly introduce new features, system enhancements, and performance optimizations.

CENTRALIZED IRRIGATION

Connect all controllers through a single network to manage multiple room watering schedules in one platform. This feature ensures consistent crop performance and eliminates operational guesswork.

PRIVACY PROTECTION

All environmental logs, alarms, and workflow data are locked on your local intranet. This setup safeguards your operations and protects your competitive advantage.

TRACKABILITY

CCMS delivers comprehensive logging across all connected controllers. It records every user-input settings, changes, alarms and more for smarter troubleshooting and continuous improvement.
